World Environment Day
"Save Wildlife"

World Environment Day is a crucial occasion to raise awareness about the importance of conserving wildlife. Wildlife plays a fundamental role in maintaining ecological balance and biodiversity. However, numerous species are at risk of extinction due to various human activities. Therefore, it is essential to emphasize the significance of protecting and preserving wildlife.

Firstly, wildlife contributes to the balance of ecosystems by regulating population and maintaining the food chain. Each species has a unique role, and their disappearance can disrupt the delicate equilibrium of nature. Additionally, wildlife provides essential ecological services, such as pollination and seed dispersal, which are vital for the growth and reproduction of plants.

WORLD ENVIRONMENT DAY

Save Soil!

Save Soil is a global movement launched by Soilgurus recently, to address the soil crisis by bringing together people from around the world to stand up for the cause. Soil is the largest carbon sink after the ocean and holds more carbon than all terrestrial plant life on the planet. But when we damage the soil, water systems become disrupted, food production declines, and carbon is released into the atmosphere.
